

**Especially  
for  
Beginners**

## **GMP'S Training Wheels**

## **GMP'S Rate Gyro**

Especially for the beginner... GMP now has a new gyro (which is also known in some circles as the "Smart Gyro").

Our new "GMP Rate Gyro" automatically trims down unwanted activity in your helicopter, while permitting your radio commands to be obeyed without resistance. Less expensive than the Quest, it is the most popular selling Gyro in the U.S.A.

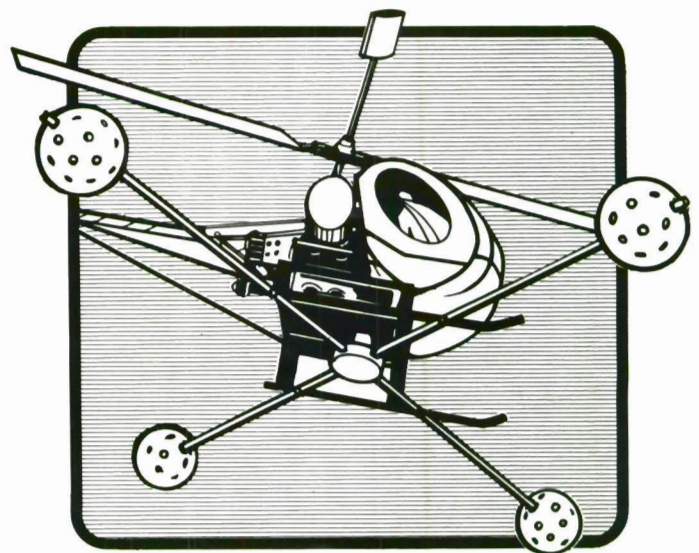

So for ease of performance stability, order your GMP Rate Gyro today!

Lightweight and easy to construct GMP's "Training Wheels" are the perfect answer for the beginner looking for some extra stability on those first few hovers.

GMP's "Training Wheels" become an extension of your landing gear in order to increase the total length and width of the gear. This extension decreases the chances of a "tip-over" with the consequent "beating itself to death" syndrome which we all fear so much in the early stages of learning.

Yes, it IS possible to learn to fly without breaking one set of blades, and GMP's "Training Wheels" are a terrific help!

HAPPY FLYING!!
